Cycle

LIQUID MECHANICAL DISHWASH COMPOUND

DESCRIPTION:

CYCLE is an economical solution for safe and effective liquid dishmachine detergent. The cleaning action of high alkalinity is combined with the de-staining capabilities of polyacrylate to give unparalleled results. Reddish brown in color with a pH of 13+.

WHAT DOES IT DO?

CYCLE is specifically designed for mechanical dishwashing. This product has highly active components that quickly emulsify grease and oils, condition the water, and prevent wear & corrosion!

WHY CHOOSE CYCLE?

Containing chelating agent for de-staining and a safe, stable organic sequestrant, CYCLE will inhibit the growth of hard water scaling on dishmachine parts. Low use dilutions produces spot-free dishes. CYCLE performs well in both high and low temperature dishwashing machines. It works great at de-staining plates and cups during the wash cycle in hard water conditions. This product contains NO organic nitrogen-containing chelating agents which can be unstable in alkaline chlorine products.

HOW IS IT USED?

Concentrations vary with water hardness. Speak with your local representative for a water hardness test to determine the optimum use level.

CYCLE is effective at use dilutions as low as 0.1% in some areas! It feeds through the machine quickly and easily. CYCLE can be dispensed directly from the shipping container and detergent is ready to wash dishes the instant the machine is turned on.

PACKAGING:

This product is available in single gallons, 4- 1 gallon/cases, 5 gallon pails, and 55 gallon drums.
